MANUSCRIPT EVALUATION

Please mark your recommendation:

ACCEPT: The article is suitable for publication in its present form.

ACCEPT WITH MINOR REVISIONS: Any required changes are minor, the editor of Proceedings will verify that the author made the recommended changes.

REVISE AND RESUBMIT: The article is acceptable for publication provided that significant changes are made, as indicated by the comment below. The revision will be re-reviewed.

REJECT: This article is not suitable for publication in JPCS.

Comment: The paper gives some extension of the Random Domino Automaton. The author introduces two extra parameters, which are related to short distance interactions between clusters and find the statistically stationary solution of the model for special values of these parameters.

The results presented in the paper are new and could be useful for further study of similar problems. Therefore, I recommend the paper for publication in Proceedings of the conference ISQS-23.
