

Textbook – p. 25

Task 1:

- 1 highly demanding
- 2 high-end
- 3 fast
- 4 plentiful
- 5 low-end
- 6 expandable
- 7 spacious
- 8 separate
- 9 integrated
- 10 compatible
- 11 reliable

Speaking 2

Sample answer:

When choosing between a tablet and a laptop, both devices have advantages and disadvantages. Tablets are slimmer, lighter, and more portable, making them ideal for travel or simple tasks like browsing and reading. Likewise, they are generally cheaper than laptops. However, laptops offer better speed, efficiency, and versatility. They are equipped with fast processors, plentiful RAM, and spacious disks, making them suitable for demanding applications and multitasking. Both devices share similar features like internet browsing and app support, and online shops as well as local retailers offer good value options. While tablets are convenient, laptops remain the better choice for reliability and performance.
